Introduction to DeFi

DeFi Infrastructure encompasses the tools and services you need to participate in the most exciting financial shift of our time. The next evolution of DeFi will go beyond pure decentralization and into real-life everyday use cases and has the power to fundamentally alter the bedrock of how we define value. We as a society need to re-evaluate beyond just the finance and banking systems. If we are to have a true decentralized revolution, we must examine and see the burgeoning power of DeFi applied to untapped, yet massive industries that are ripe for disruption.

DeFi, short for decentralized finance is the notion that crypto can empower a decentralized architecture, outside of companies' and governments' control. Decentralized Finance often called DeFi or open finance refers to the economic paradigm shift enabled by decentralized technologies, particularly blockchain networks. From peer-to-peer payment systems to automated loans to USD pegged stablecoins, DeFi has emerged as one of the most active sectors in the blockchain space, with a range of use cases for developers, individuals, and institutions. While DeFi stands for decentralized finance, the fact it's permissionless is equally as important, perhaps more so in its current state. It means, essentially, that anyone can use these services, with the only barrier to entry being a little bit of technical knowledge.

Introduction to NFTs

The Internet opened up new non-fungible collectibles to the world, such as digital art, domain names, social media handles, and many more, but claiming ownership, transferring those items, and buying & selling is a complicated process. That's why NFTs were born. Basically, they are representations of non-fungible items in the form of tokens.

Crypto tokens for NFTs have many different advantages because they are on a blockchain:

Interoperability

Tokens from decentralized protocols can be programmed so they can work in many different applications, which can make the experience more complete, useful and interesting, and it can expand the possible applications of NFTs to new & exciting use cases.

Programmability

Because tokens need to be created through a smart contract, the possibilities are endless. There are a lot of different things that can be changed, like max supply, inflation economics, and a lot of things that can be implemented on them, like trading history, date of creation, useful information, etc.

NFTs Continue

Easier to Trade

Blockchain tokens are international, and there are fewer barriers to buy & sell them compared to traditional markets. Crypto markets operate 24/7, automatically, and tokens add a layer of abstraction to any collectible, which makes trading simpler and quicker.

Traceability

Blockchain records are immutable, and can be inspected to see the original source.

Ownership

Tokens can represent unalterable ownership.

Authenticity

Tokens contain all the information regarding the item, so authenticity is easier to prove.

NFTs make a lot of sense in gaming environments, especially those with unique properties and use cases. NFTs that you can use in games, or inside different protocols.

SETSPACE

GameFi and Metaverse

A metaverse is a network of 3D virtual worlds focused on social connection. In futurism and science fiction, the term is often described as a hypothetical iteration of the Internet as a single, universal virtual world that is facilitated by the use of virtual and augmented reality headsets.

Metaverse give access to a new world that excited to explore. GameFi is the intersection between blockchain based games and finance, creating new opportunities for gamers, and also allowing game developers to be innovative in their new creations, thanks to the blockchain technology. Also called Play-to earn, GameFi is about having having unique fan experiences and in-game rewards. A metaverse simulates real-world interactions and economies in a digital environment. It's an alternate digital reality to socialize, work, play, and transact.

SETSPACE

SST Swap

SST Swap platform, on which tokens can be bought, sold and staked. The platform under development;

- Allows any token to be listed on SST Swap, add locked liquidity and create trading pairs.
- Listed tokens can be traded on the SST Swap platform. The number of listed tokens and the number of trading pairs listed on the platform will increase exponentially over time.
- Allows staking of any listed token, especially Set Space Token.

SETSPACEtoken.com

SETSPACE

SST NFTs

SST NFTs platform creates NFTs of space, universe, mythological creatures, characters and necessary equipment for games. Via the platform;

- NFTs can be traded.
- NFTs can be rented for a while. NFTs can be rented for a period of time. A player can rent an NFT which is can be necessary equipmant for the game or can rent any NFT that he does not own from another player who owns the NFT, by mutual consent.
- NFTs can be staked. An NFT used and owned in-game can be improved by staking.
